

The 3rd Conference on Invasion Biology, Ecology, and Management, with a theme of *"Where we were, Where we are, and Where we should be,"* will feature a series of plenary speakers and submitted papers addressing invasive organisms at all levels (plants, animals, insects, pathogens) and from a variety of perspectives. Research, technical and non-technical concurrent sessions and forums on a wide array of topics pertaining to invasions and invasiveness will be offered, including detection, mapping, and monitoring, biology and ecology, community and ecosystem effects, and mitigation and management. The meeting will conclude with an evening forum, *"Some Conservative Viewpoints on Climate Change."*

April 2-4, 2013 on the University of Kentucky campus.
